

## IBM ASSIGNMENT- I

TEAM ID : PNT2022TMID26661

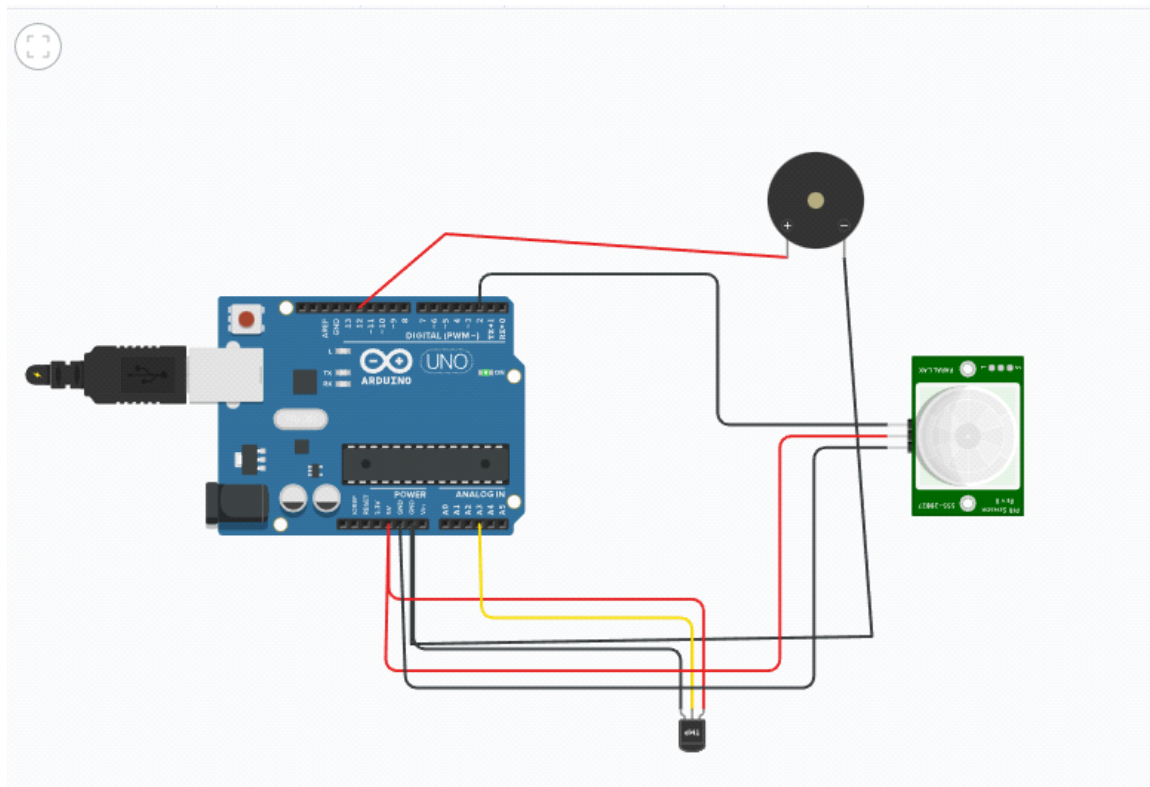

NAME : SARAN KUMAR.S

ROLL NO: 212919106078

Create a circuit with Piezo alarm, PIR Sensor, TMP Sensor with below functionalities:

- 1.Alarm should sound in one manner if temp is above 60C
- 2.Alarm should sound with another frequency if motion is detected in PIR Sensor.

CIRCUIT LAYOUT:

## CODE:

```
void setup()
{
  Serial.begin (9600);
  pinMode(2, INPUT);
  pinMode(12,OUTPUT);
  pinMode(A3,INPUT);
}

void loop()
{
  int motion = digitalRead(2);
  if (motion==1){
    Serial.println("Motion detected");
    tone (12,20000);
    delay(500);
  }
  else{
    Serial.println("No Motion");
    noTone(12);
  }
}

{
  double data=analogRead(A3);
  double n=data/1024;
  double volt=n*5;
  double off=volt-0.5;
  double temperature=off*100;
```

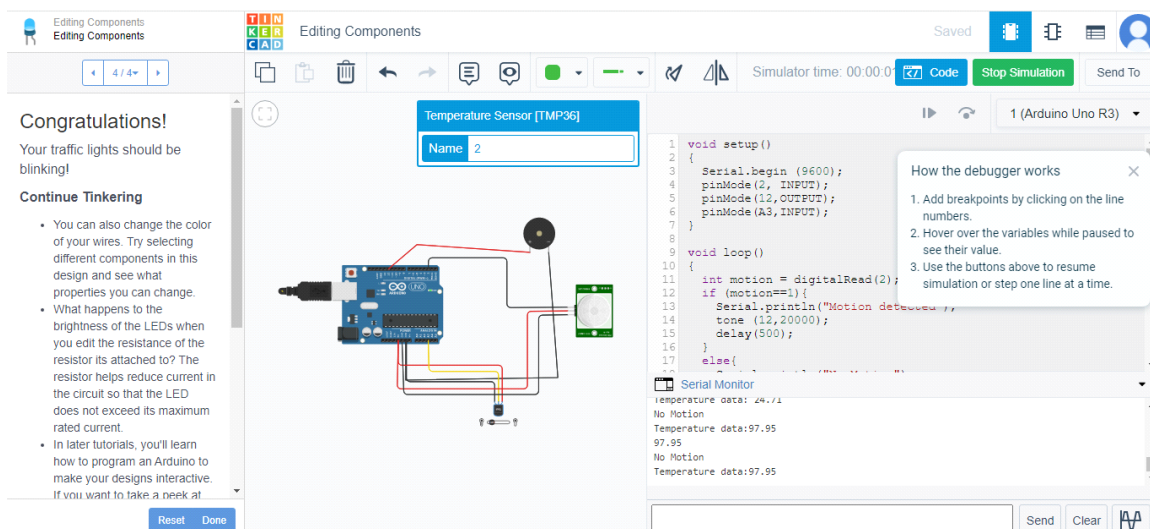

```

if (temperature>59.99){
  Serial.print("Temperature data:");
  Serial.println(temperature);
  tone(12,10000);
  delay(500);
}
else
  Serial.print("Temperature data: ");
  Serial.println(temperature);
  noTone(12);
}
}

```

## OUTPUT:

## PASSIVE INFRARED SENSOR:

## TEMPERTURE SENSOR (60 C):

Simulator time: 00:00:00

1 (Arduino Uno R3)

### Congratulations!

Your traffic lights should be blinking!

#### Continue Tinkering

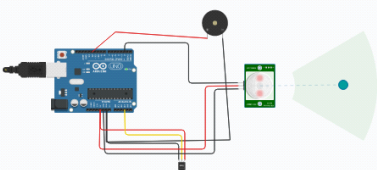

- You can also change the color of your wires. Try selecting different components in this design and see what properties you can change.
- What happens to the brightness of the LEDs when you edit the resistance of the resistor its attached to? The resistor helps reduce current in the circuit so that the LED does not exceed its maximum rated current.
- In later tutorials, you'll learn how to program an Arduino to make your designs interactive. If you want to take a peek at

PIR Sensor

Name	1
Target X	-5.44
Target Y	-135.50
Target Z	-199.40

```
1 void setup()
2 {
3   Serial.begin(9600);
4   pinMode(2, INPUT);
5   pinMode(12, OUTPUT);
6   pinMode(A3, INPUT);
7 }
8
9 void loop()
10 {
11   int motion = digitalRead(2);
12   if (motion==1) {
13     Serial.println("Motion detected");
14     tone(12, 2000);
15     delay(500);
16   }
17   else{
18     Serial.println("No motion detected");
19   }
20 }
```

#### How the debugger works

1. Add breakpoints by clicking on the line numbers.
2. Hover over the variables while paused to see their value.
3. Use the buttons above to resume simulation or step one line at a time.
